

FOR IMMEDIATE RELEASE

AIR-TRANSPORT IT SERVICES, INC. PROVIDES FULLY INTEGRATED SUITE OF SOFTWARE TOOLS TO ANTALYA INTERNATIONAL AIRPORT

August 17, 2008, Antalya, Turkey – Air-Transport IT Services, Inc. (AirIT), a key provider of diversified information technology products and services to the air transportation industry, today announced that they have signed an agreement to deploy a full complement of business and operational software tools at Antalya International Airport. The new software solutions will include an Airport Operational Database (AODB), Resource Management System (RMS), Flight Information Display System (FIDS), Local Departure Control System (LDCS), Extended Airline System Environment (EASE) and Baggage Reconciliation System (BRS).

After careful consideration, AirIT was selected for this ambitious project based on their expertise and expansive installed base of other fully integrated airport projects. The new joint venture company, Fraport IC İçtaş Antalya Airport Terminal Investment and Management Inc. has set very high goals for the airport's performance and this new technology initiative has been identified as one of the critical steps to achieve those performance goals.

AirIT has been an innovator in the field of integrated operational software solutions for airports and in fact, is the only true single-source provider of fully integrated airport solutions. AirIT enjoys an unparalleled record of success with integrated solution projects. Similar solutions have been deployed at Miami International Airport, Philadelphia International Airport, Sacramento International Airport, San Jose International Airport and Lima International Airport. Each of those projects resulted in measurable gains in operational efficiency and customer service improvements for the travelling public. The long-term goal for the Antalya project is the total integration of all three terminals, providing an efficient, seamless operating environment for the airlines while creating maximum flexibility and revenue potential for the airport.

A focal point of the project is the introduction of AirIT's EASE/LDCS airline common use solution. EASE will allow all of the airlines that fly to and from Antalya the ability to use their own proprietary software environments. This is extremely important as many airlines don't have conventional common use software or simply don't like to use it. Additionally, the LDCS component of the solution will allow airlines without their own software environments to provide their passengers a "true airline" check-in experience.

AirIT is extremely proud to continue its expansion around the globe. Betros Wakim, AirIT President and CEO states, “Antalya represents a great opportunity for AirIT to introduce some of our finest software solutions to a new part of the world. We are anxious to demonstrate the power of our integrated technology suite in Antalya. We are confident that this project will help the airport meet and exceed its long-term performance goals.” Alexander Zinell, General Manager adds, “We are truly excited to have the opportunity to partner with one of the world leaders in airport technology. Their experience coupled with this dynamic airport environment will surely result in a winning combination. This project is just one small step in achieving our goal of positioning Antalya as one of the premier transportation facilities in the world.”

About Antalya International Airport

Antalya International Airport serves 15 million international and 2.5 million domestic passengers annually; it is the second largest airport in Turkey and serves as the primary transportation gateway for Turkish tourism. The airport has experienced a 15% average annual growth rate over the last ten years.

About Air-Transport IT Services, Inc.

Air-Transport IT Services, Inc., with corporate offices in Orlando, Florida, offers airlines and airport IT systems that enable them to deliver, display, manage and employ information that improves operations, customer satisfaction and revenue generation. The company’s airport operational, passenger processing and revenue management solutions are the most comprehensive offerings available to the global air transportation industry. AirIT solutions are based on open systems and run in a client/server and web based environment. In addition to its product offerings, AirIT also provides consulting services, networking and installation and 24 x 7 support.
