SACRAMENTO INTERNATIONAL AIRPORT AND AIR-TRANSPORT IT SERVICES, INC. ANNOUNCES THAT JETBLUE JOINS ALOHA AIRLINES ON THE AIRPORT COMMON USE PASSENGER PROCESSING SYSTEM

May 23, 2006, Sacramento, CA – Sacramento International Airport (SMF) and Air-Transport IT Services, Inc. (AirIT), a key provider of diversified information technology products and services to the air transportation industry, today announced that JetBlue Airlines began operations and has joined Aloha Airlines on the airport provided common use passenger processing system. EASE™, Extended Airline System Environment, is a new and innovative technology that allows multiple carriers to efficiently process passengers utilizing common or shared hardware and network infrastructure provided by the airport. Typically, airports assign or lease ticket counters and gates exclusively to one carrier whether that carrier utilizes them once or 10 times a day. The significance of this advancement enables the airport to dynamically assign Ticket Counter and Boarding Gate resources to those air carriers as they need them. The flexible assignment of these resources allows the airport to optimize utilization by allowing Aloha and JetBlue to share the counters and gates during different times throughout the day. And unlike traditional Common Use platforms, EASE™ allows the carriers to operate and process passengers within their own point of sale and back office software applications.

“We’re very excited and proud that the Sacramento International Airport chose EASE™ as their common use platform. EASE™ will allow the airport to more effectively manage and optimize their brick and mortar investment by handling more operational activity without having to build another gate or ticket counter. Additionally, the technology will enable SMF to attract more carriers by eliminating the upfront investment carriers inevitably incur when moving into a new market” said Chris Keller, Executive Vice President and CSO of AirIT.

Steve Elrod, Deputy Director of Information Technology and Telecommunications, states that "EASE allows the airport to efficiently manage both the expected growth in carriers and the growth in new city pairs. Technology is central to our success here in Sacramento and we are pleased that two of our airline partners have recognized the benefits of the system and are operating with in this new environment."

Further benefit is derived from the decrease in the airlines operating cost at SMF by eliminating the cost to deploy their own systems as well as leveraging the airports on-site maintenance and support system. "JetBlue Airways believes that Sacramento Airport's common use EASE™ system is well named! This system allows airlines that are concerned with delivering superior customer service to hit the ground running, assisted with easy access to their own independent tech systems from several locations within the terminal. Not only does the common use system help us deliver our signature "JetBlue Experience" by its simplicity, but it is also well maintained by a conscientious staff of detail-minded Air IT and airport personnel, making it a great product on its own right. It's a great product that assists us in our on-going efforts to deliver a great air-travel experience to the public!" says Rudy Lucero, General Manager for JetBlue Airways.

About Air-Transport IT Services, Inc.

Air-Transport IT Services, Inc., with corporate offices in Orlando, Florida, offers airlines and airport IT systems that enable them to deliver, display, manage and employ information that improves operations, customer satisfaction, and revenue generation. The company's airport operational and revenue management solutions are the most comprehensive offering available to the global air transportation industry. AirIT solutions are based on open systems and run in a client/server and web based environment. In addition to its product offerings, AirIT also provides consulting services, networking and installation, and 24 X 7 support.
