

FOR IMMEDIATE RELEASE

AIR-TRANSPORT IT SERVICES, INC. ADDS SIOUX FALLS REGIONAL AIRPORT TO THE RAPIDLY EXPANDING LIST OF AIRPORTS CHOOSING ITS CONTEMPORARY VIRTUALIZED SHARED-USE PASSENGER PROCESSING TECHNOLOGY

April 14, 2011, Orlando, FL – Air-Transport IT Services, Inc. (AirIT), a key provider of diversified information technology products and services to the air transportation industry, today announced that they are providing their EASE™ shared-use infrastructure platform solution to the Sioux Falls Regional Airport. This technology is being implemented as part of the airports ambitious redevelopment strategy.

AirIT's shared-use airline check-in system, EASE™ (extended airline system environment), ultimately will allow any equipped ticket counter or gate podium to be utilized by any airline operating on the system. This added efficiency will dramatically reduce airline costs and make the decision to add or expand service easier. By shifting the burden of IT infrastructure deployment from the airline to the airport, the airport will have a competitive advantage that will quickly be recognized by the airlines. Most importantly, the airport will enhance its ability to attract new service and maintain its existing service by enhancing the airport's ability to differentiate itself from other airports of similar size and market potential by providing lower airline start up and operating costs and greatly reduced risk. Initially, American Airlines, Allegiant and Delta Airlines will utilize the EASE™equipped facilities. Frontier Airlines will also use the system when they begin service in July.

This contemporary technology platform delivers true flexibility and cost savings that airports can deliver to their airline partners. The implementation of shared use will serve as an air service development catalyst. Unlike most other air service development incentives, investment in infrastructure positively affects airline-operating costs on an ongoing basis and allows the airport to share the benefits of its investment across multiple airlines. Betros Wakim, CEO and CTO of AirIT, supports the airport's commitment to growing air service and states, "In a tenuous economic environment, it takes aggressive steps for airports to attract new air service. Sioux Falls is demonstrating their desire to attract and maintain air service for their community. By selecting the EASE™ infrastructure platform, they have invested in technology that will deliver invaluable benefit and value today and far into the future. The solution represents what is simply the best shared-use technology available. Its demonstrated ability to use a virtualized environment to support any airlines proprietary IT system or legacy common-use application is unequaled today." Dan Letellier, Executive Director of the airport adds, "We believe that the addition of this innovative technology to our concourse reconstruction project will provide a valuable service enhancement and deliver tremendous facility efficiency and flexibility for the airlines."

About Air-Transport IT Services, Inc.

Air-Transport IT Services, Inc., with corporate offices in Orlando, Florida, offers airlines and airport IT systems that enable them to deliver, display, manage and employ information that improves operations, customer satisfaction and revenue generation. The company's airport operational, passenger processing and revenue management solutions are the most comprehensive offerings available to the global air transportation industry. In addition to its product offerings, AirIT also provides consulting services, networking and installation and 24 x 7 support. AirIT is proud to be one of the top 100 best companies to work for in Florida, according to Florida Trend Magazine's annual issue of "Florida's Best Companies to Work For."
